

20 June 2017

Year 5 and 6 have had a brilliant week! The highlight of which has been the trip to the National Space Centre in Leicester. The children had the opportunity to look around the gallery to deepen their knowledge of space. They were also lucky enough to visit the largest planetarium in the UK. A big thank you to the helpers. We will be using the knowledge we gained in our future science lessons.

In addition to this, we have continued to work on our investigative and problem solving skills in maths- the children have been tasked with designing a theme park on the moon. This task involves applying a wide variety of mathematical skills including: area and perimeter, budgets, profit and loss. Everyone is fully engaged, developing their reasoning skills and loving this project.

Last week ended in a bit of an unusual way. Due to staff illness, Miss Papuga was lucky enough to have all of primary to herself (with support of secondary staff). We started the day off quite formally by completing spelling and reading age tests. After that, we were given the task of designing a new space food product, for astronauts to take with them to Mars. The main focus of this task was to develop our OneSchool Skills – especially team work and cooperation. We designed our new product, made prototype packaging and a poster persuading NASA to choose our product. Great fun was had by all!
